BLOCKWELL™

WHAT HAPPENED???

"There's an outgoing transaction from my wallet"

"I never signed up for Casper token airdrop!"

"Is my wallet and private keys safe?"

"What the f*** are you guys up to?!"

"You broke the blockchain!!!"

WHAT ACTUALLY HAPPENED?

What we did is a first of its kind, we call it a KYC Drop. We sent out the KYC Casper Tokens to more than a million wallets as a way to log your addresses in the blockchain for interaction with our upcoming KYC Portal. Our KYC Portal will be used for our KYC enforced Cross-chain DEX (decentralized exchange) called Wellspring, and in the event of a crowdsale we will use to verify, consider, and white list appropriate applicants in accordance and good faith regulatory compliance.

We never had control of your private keys, what we can control is our own KYC token contract and how it interacts with your wallet. The Casper token is proof of that. Think of our token as a friendly ghost, living up to its name, making records of your existence on-chain so you have the possibility of being an early adopter of our platform. Technically it never entered or left your wallet because it does not exist in the first place. We made it look like it went through your wallet, make a quick registry and POOF!

HOW IS THAT POSSIBLE?

The wallets we targeted are wallets picked up by our scripts, intended to identify people that would most benefit or be interested in our project. This doesn't actually use your keys, it's based on how tokens work. We figured it out before anyone else did and used it in an innovative way because we know that what people think tokens are, and what they actually can be are two wildly different things. Showing you that and inspiring you to build the future is a key part of our mission at Blockwell.

Once KYC process is launched you'll be able to register your KYCDropped wallets and apply for consideration to our platform. If approved you'll send your newly delivered KYC token to your KYC-verifier address to prove you own the wallet and be eligible to receive Blockwell tokens.

HOW ABOUT GAS COST?

We paid all the gas cost. We paid 10% of what it should have cost. How? We've been at this for a long time, in stealth mode. We knew how to lower gas costs, increase transparency, improve regulatory compliance, and reach a million people all while bootstrapping. Take it as proof of our competency and try out our platform via www.blockwell.ai

SO WHAT WAS THE POINT OF ALL THIS?

We wanted to get the word out, hence the million wallets. We want to let people know that this is possible, demonstrate our skills, and let the world know before scammers use this sleight of hand to trick people. This isn't a vulnerability in any wallet but the wrong people could use it to their advantage if users don't know to check their token balance first and made a panicked decision.

NO, THE BLOCKCHAIN IS NOT BROKEN

We've reviewed all other blockchain with equal diligence and expertise and we can assure you ethereum is still the most technically adept. It's just all the software that's built on top of it that isn't really paying attention to how the system actually works. Your keys are 100% safe but tokens can do way more than the projects to date have led people to believe. The only difference is, we understand emerging tech really really well and we really get this blockchain thing.

BLOCKWELL™

YOUR NEXT STEP

1. So you encountered our Casper token, what next? Sign up for the email list from our website to be notified when our whitepaper drops.

2. **WIN 10 ETHER IN 10 MINUTES**

   Check out 10in10.blockwell.ai for a chance to win10 Etner in 10 minutes. Not a developer? Sign up and you may win some ETH just for referring developers!

DO NOT JUST TAKE OUR WORD FOR IT

You can test our work right now!

Checkout apidocs.apiminer.com Create your own tokens, and submit them to our contest 10in10.blockwell.ai

You can also fork our mobile wallet github.com/blockwell-ai/apiminer-wallet and load your own Blockwell spout token in.

Update the branding and you've got your very own mobile wallet for your very own token. Fully ready to submit to Google Play just as soon as you get the backend server online (which we provide instructions on). You'll find our devhelp email address right on the API Docs. If you're an entrepreneur feel free to reach out too and we'll give you some tips on how to find the right developer to build your blockchain product.
